Summary

Master of Information Technology (Computer Science) graduate from Queensland University of Technology with software engineering experience across full-stack development, data engineering, and database-driven applications. Contributed to an athlete analytics platform for Tennis Australia, building frontend features, integrating APIs, improving UI/UX, and supporting cloud deployment. Previously worked as an Associate Software Engineer at Carelon Global Solutions with experience in Python and SQL. Seeking graduate and junior software engineering opportunities.

Technical Skills

Programming Languages: C, C++, JavaScript, Python, SQL
Frontend: React.js, React Native, HTML, CSS, Tailwind CSS, Mantine UI
Backend / Databases: Node.js, Express.js, MySQL, MongoDB
Tools / Platforms: Git, GitHub, Docker, AWS S3, AWS Amplify, AWS EC2, VS Code
Concepts: Full-Stack Development, REST API Integration, Responsive UI Design, Agile, SDLC, Testing, Database Optimization, Data Integration, Blockchain, Smart Contracts

Education

Queensland University of Technology

Jul 2024 – Jun 2026

Master of Information Technology | GPA: 6.0/7.0

Brisbane, QLD, Australia

- Applied concepts in SQL, object-oriented programming, MERN stack development, React Native, and agile methodologies through academic and industry projects.
- Worked with an industry partner, Tennis Australia, to design and develop a scalable full-stack analytical web application for competition and performance analysis.
- Developed blockchain applications using smart contracts, gaining exposure to decentralized architectures.
- Gained hands-on experience in cloud deployment and CI/CD pipelines, including deploying web applications using AWS services.

Cambridge Institute of Technology

Aug 2019 – May 2023

B.E in Computer Science and Engineering | CGPA: 7.96/10.0

Bangalore, Karnataka, India

- Gained foundational knowledge in data structures, SQL, Linux systems, networking, Android development, and web development.
- Completed multiple academic projects applying these skills, including a home automation system using human detection with Raspberry Pi.

Experience

Tennis Australia (Work-Integrated Learning)

Aug 2025 – May 2026

Software Developer

Brisbane, Australia

- Contributing to the design and development of a full-stack analytical web application used to explore player competition data and performance insights.
- Built and refined frontend features using React and TypeScript, including responsive split-screen layouts, data tables, row selection workflows, compact table headers, and video preview states.
- Integrated frontend with Node.js-based backend APIs, enabling dynamic filtering, multi-match selection, and pillar-based analytical views.
- Deployed and managed application components using AWS services such as S3 and Amplify.
- Applied CI/CD concepts for automated build and deployment workflows, improving development efficiency and release consistency.
- Translated stakeholder feedback into production-ready UI improvements across selectors, tables, summary panels, and video components.
- Worked in an agile environment using Jira, contributing to sprint planning, user stories, and iterative feature delivery.

Carelon Global Solutions

Jul 2023 – Jul 2024

Associate Software Engineer - 1

Bangalore, Karnataka, India

- Developed and optimized ETL pipelines using Python and SQL for large insurance datasets, improving data accuracy and processing efficiency.
- Designed and maintained stored procedures and SQL scripts for data extraction, transformation, and reporting.

- Automated recurring data workflows, reducing manual intervention and delivery time.
- Enhanced database performance through query optimization and indexing in MySQL environments.

Samsung

Jul 2021 – Feb 2022

Software Developer Intern

Bangalore, Karnataka, India

- Developed a Malayalam-language chatbot using Rasa and SpaCy for natural language understanding, enabling automated customer support and sales interactions.
- Implemented intent classification and entity recognition pipelines to improve conversational accuracy and response relevance.
- Integrated the chatbot with a conversational UI for real-time interactions, enhancing accessibility for regional language users.
- Optimized dialogue flows and response handling, reducing manual support effort and improving user engagement.

Projects

EventX | *React.js, Mantine UI, Full-Stack Development*

Apr 2025 – May 2025

- Developed the frontend of a full-stack event management application using React.js and Mantine UI, ensuring responsive and maintainable interfaces.
- Applied SDLC principles and Agile methodology across iterative planning, development, testing, and feature refinement.
- Collaborated in a team-based project using component-based architecture and modern UI and UX practices for cross-device usability.

Human Vein Detection using NoIR | *Python, Machine Learning, OpenCV*

Jan 2023 – Apr 2023

- Engineered a real-time machine learning-based prediction system to detect veins in obese patients using NIR and NoIR imaging.
- Enhanced image contrast by 40% using CLAHE and trained an ML model for accurate vein location, reducing nurse retries and patient discomfort.
- Developed a fault-tolerant data logging pipeline to ensure consistent operation under various lighting and user conditions.
